

## Product Data Sheet

---

Product Name: OligoInventory™

Product Number: AG-BT003-1

Description:

OligoInventory™ is a web-based system for archiving oligonucleotide records into a security-protected database.

Oligonucleotide records can be annotated to include the reference ID for the target gene, species, position of oligonucleotide

sequence with respect to a reference sequence (e.g., residue position in specified GI number or Affymetrix ID sequence), reference sequence type (e.g., cDNA, genomic), direction (e.g., forward or reverse), the intended application (e.g., PCR, RT-PCR, qPCR, RTS, siRNA, sequencing, antisense, morpholino, gripNA and other), manufacture and investigator/technician name. Oligonucleotides can be added individually or *en masse* to the database. For *en masse* entry, oligonucleotides along with associated annotations can be uploaded from an Excel file.

Terms of usage:

License is required. For more information contact Array Genetics at [info@arraygenetics.net](mailto:info@arraygenetics.net).
